Re: Windsong at Windermere
Development Program Change
Project № 13-060

The proposed development program for Windsong at Windermere has been reduced from 64 single family residential units (in original traffic study) to 59 single family residential units. This change will result in a decrease in the proposed development's trip generation of approximately 50 daily trips and 5 peak hour trips. This change will have a negligible and imperceptible impact on the projected traffic conditions.

While the modified development program would reduce the traffic generated by the site, the change is not likely to alter the findings of the analysis. The Traffic Analysis submitted in support of the application continues to be valid for the proposed development program.
